

# Stars Get Glowing for The Oscars® with OXYjet

Following the announcement that OXYjet UK, distributor and training provider of **professional oxygen-based skin rejuvenation** systems are working with Super Facialist, Adeela Crown, the company are thrilled to reveal further details.

In preparation for the red carpet a number of high-profile names attended Crown's skin suite at **Hotel Bel-Air** the week before the 92<sup>nd</sup> Academy Awards which took place on Sunday 10<sup>th</sup> February at The Dolby Theatre at the Hollywood & Highland Centre in Los Angeles. One of the biggest nights of the year for the film industry, it's no secret that many hours of preparation go into getting the stars looking and feeling their best in time for the event and the press attention it attracts from around the globe.

**Adeela Crown** chose the iconic Hotel Bel-Air, part of The Dorchester Collection to host her skin suite for the third year running with attendance strictly by invitation only. The property, tucked away in the exclusive gated neighbourhood of Bel-Air in the West of Los Angeles is no stranger to A-Listers who check in for the luxurious surroundings and the privacy provided.

Crown already offers clientele the OXYjet experience to get skin glowing from The Dorchester when in London, however she has added the **oxygen-based skin rejuvenation treatments** to her treatment menu as she travels

to spread the glow! The pressure pulsed action used by the device 'shoots' serums with **concentrated active ingredients and microencapsulated oxygen** into the skin without the use of needles. This **encourages skin cell regeneration, reducing the appearance of wrinkles** and pigmentation irregularities resulting in a **smoother and more uniform complexion**.

We can now reveal that in the week before the Oscars® Adeela opened her suite to five-time Oscar nominee, **Sir Kenneth Branagh**, who is currently working on a production of Death on the Nile due to be released later this year. American actress **Annette Bening** was also treated to Adeela's signature treatment, Crowning Glowry™ with the OXYjet Go in preparation for the big night. No stranger to the Oscars®, Bening has four Academy Award nominations under her belt.

Star Wars actress, **Daisy Ridley** was welcomed by the Super Facialist at Hotel Bel-Air, with her latest film, Star Wars: The Rise of the Skywalker being Oscar nominated for Best Original Score this year. **Tyrese Gibson**, whose latest film, F9, part of The Fast Saga is due for release in May also received an OXYjet Glow before he was documented attending the Vanity Fair Oscars Party.

### **The OXYjet Glow**

Introduced to the market just last year, the **OXYjet Go** draws on the original German technology used in their professional oxygen skin rejuvenation systems used worldwide by skin professionals. Adeela Crown uses the Go on film sets to prepare the stars for their big screen appearances including close up shots which later appear in HD on The Big Screen.

The pressure pulsed method delivers microencapsulated oxygen and active ingredients into the dermis via serums. This energises cells and fills the gaps between them plumping the skin. This leads to the reduced appearance of wrinkles and fine lines. The system also targets pigmentation irregularities and helps create a smoother and more uniform complexion.
